

100% NATURE

SANTUREL

VAScuNET®

+ OMEGA 3

Vascunet is a vascular cleaner and strengthens the bodily system.

Good circulation is vital for our organs, muscles and joints. The better the vascular system, the better the body functions. Blood carries oxygen and nutrients to cells all over the body and transports a variety of waste matter from these cells to the liver and kidneys, where it is processed and eliminated.

Why vascular problems?

Arteriosclerosis only manifests in the arteries as only these blood vessels have a muscle wall. Contraction of this muscle wall increases blood pressure, so that more oxygen and nutrients can be transported to the tissues.

Problems occur when this muscle wall becomes damaged. Minute muscle tears appear in the wall of the blood vessel, in which various substances, including calcium and inflammatory cells, lodge themselves. The lodged minerals also attract substances such as fats and waste products and these form a slick, waxy substance - cholesterol.

In a stable, healthy body the immune system takes care of these substances, but the risk increases and a variety of health problems can ensue if the system is weakened as a result of poor diet, stress, increased glucose level (diabetes), high blood pressure or risk factors such as smoking or alcohol, all of which inhibit the body's ability to adequately respond.

What is the solution?

The body has an innate capacity for self-healing, provided its nervous energy is not obstructed and that we give the body the necessary nutrients (diet) to keep it healthy and balanced. Regular exercise, keeping stress under control and drinking enough water help to prevent, inhibit and cure vascular disease.

Supplementation with VAScuNET will significantly stimulate this self-healing ability by:

- ° **neutralising** free radicals, to prevent cell damage
- ° stimulating **production of LPL** (lipoprotein lipase) to eliminate fats
- ° smoothing the blood and arterial wall to prevent obstructions and hardening (note: **the blood is not thinned!**)
- ° developing parallel blood vessels around obstructions, so that important tissues remain supplied with blood
- ° **dissolving blood clots**
- ° **removing heavy metals** such as mercury, lead, cadmium, etc.
- ° normalising blood pressure
- ° combating oxidation of vital tissues
- ° **lowering cholesterol**

To accomplish this VAScuNET is made up of more than 30 different elements, all of which are **100% natural!**

Dosage and use.

VAScuNET is taken in two phases:

(1) **Treatment:** this phase lasts 1 month for every 10 years of age. For example, if you are 60 years of age your treatment phase will last 6 months. You take 6 tablets per day at the rate of two per mealtime. The number of tablets may be increased to 10 per day if you have vascular problems. This should first be discussed with your doctor or therapist.

(2) **Maintenance:** after the treatment phase ends one can reduce dosage to 2 to 4 tablets per day for those with vascular problems.

When can I expect improvement?

The answer to this question varies by individual. Some note improvement after only a few weeks. With others this can take several months. However, a marked difference should be felt/seen after 3 months if VAScuNET is taken correctly.

How long must/can I use Vascunet?

After the treatment phase one has the option of continuing with a maintenance dosage. One can continue to use VAScuNET as it is **100% vegetable** matter and there are no side effects.

Pregnancy/breastfeeding and children.

No cases of complications have been reported. Since it only contains plant matter, there is no problem in continuing to use the product. If intermenstrual bleeding or increased risk of premature birth is present, it is advisable to first consult your therapist or doctor.

There is no danger for children, but the dose can be adjusted to the size of the child.

Is VAScuNET suitable for diabetics and people with allergies?

Yes, it contains no lactose and is **gluten free**. VAScuNET is also **halal**.

Vascunet is, indeed, recommended for both type I and II diabetics in view of the disease's possible vascular complications.

Side effects/complications

There have been no reports of side effects. Very rarely, people with stomach/bowel problems may be mildly affected - but this is harmless. Should this occur, it is desirable to adjust the dosage.

Vascunet is available in jars of 300 tablets.

Registered n° NUT/PL 713/1.
